Projects

卐 | Jarvis

JARVIS is a virtual assistant, inspired by Iron Man, designed to assist users in various tasks. Although it has not yet integrated with hardware due to ongoing studies, this feature may be added in the future. Its functionalities include:

- Incorporating three distinct AIs: GPT4, Gemini AI, and Mistral
- Generating images through Bing
- Optical Character Recognition (OCR)
- Summarizing YouTube videos
- Creating PowerPoint presentations
- Executing Shell Commands
- Writing and executing Python code to carry out actions

卐 | YouTube Video Automation Toolkit

This project involves leveraging the Gemini API to create YouTube video scripts. It scrapes the previous video title using the YouTube API, executes commands from Gemini, and utilizes pyttsx to generate a voice-over. During script execution, it records the screen with voice, creates a thumbnail, and uploads the video to YouTube via the API.
